3. Code Review Approach	3
4. Result	3

1. Version

Version	Date	Description
0.1	12-04-2022	Make code review document
1.0	16-06-2022	Version 1.0 of code review document

2. Scope

This document will show code review from a group project consist of Airell Rasendriya Bachtiar, Borek Bandell, Nick van der Meer, Nikola Stankov, Roel Habets, and Viktor.

3. Code Review Approach

Code review is done by choosing 2 commits done by Borek Bandell and Roel Habets. A meeting is conducted to discuss the code and give feedback for improvements. Reviews are posted in GitLab when they send a git request. After they make the improvement, the git request will be approved.

4. Result

Borek made a tutorial feature and based on that Airell give feedback from it. Here's the prove:

I think it's better to put the styling in CSS instead of injecting it inside the element.

Roel made an algorithm and design for displaying top rated packages/apps. Based on that Airell give feedback from it. Here's the prove:

Code looks good and readable. But what happen if the list of top rated packages return an empty array? Should it check if the array empty or not and based on that it should decide if we want to display the package or not. Add -webkit-text-stroke to the title of packages so it doesn't blend to the background of the page.
